Subject: wi-fi- Tower at 1395 Beach Ave. -- Residential Zone

Thursday, April 30, 2009

Hello Dr. Ballum;

Further to my emails to you and to Mayor and Council regarding the fund raising taking place in the back alley of 1395 Beach Avenue, in the West End of Vancouver, British Columbia.

As you know the West End is home to over 50,000 residents. We live in a very densely populated area. Further, the West End is home to many children — the downtown peninsula now has more children than traditional family neighbourhoods such as West Point Grey or Kerrisdale. The West End has two elementary schools: Lord Roberts & Lord Roberts Annex. The neighbourhood is also served by one high school King George Secondary.

While you are reviewing this matter of electrical upgrade of **200,000 Watts to 400,000 Watts**, and the high intensity of radiation already existing in the West End, I have attached for your consideration further documents, showing the intensity of the existing towers already installed in the West End.

Keep in mind, the town council of Hérouville-Saint-Clair (Calvados-Normandy), with a population of 24,000, is removing the wi-fi network (wireless Internet) in its schools before the end of the year, four days after the launch of the "Radiation Round Table" in Paris. The Mayor Rodolphe Thomas said that, "**We are going to apply the precautionary principle. Our job is to protect people's health.**"

I ask the question Dr. Ballum, as to whether you would argue with the world community, that the capacity of electrical radiation around the West End is safe for the residents?

As a gynecologist, you know that too much alcohol is dangerous to a fetus and you know that too much radiation is also very dangerous for the fetus and for young and old as well.

I suggest to you and to those in favour of wi-fi at city hall to take your children or grand children

5/1/2009

and put them in front of a working microwave and see whether or not those children will remain healthy in the long run.

Just like you Dr. Ballum, BC Hydro also knows the effect of high intensity radiation it has on people and the fact that BC Hydro and the city has concealed that information from the residents of the West End is not only reckless but also criminal.

I would reasonably expect that the fund raising at 1395 Beach Ave. cease and desist and that you advise **Bonniehon Enterprises -- Susan Wong a.k.a. Paul H. Cody -- Bell Mobility and BC Hydro** to stop the bullying in the West End. Mayor Robertson cannot blow and suck at the same time, by claiming to be a tree hunger and support intense radiation from cell towers.

The cell towers in a residential zone should not have ever been permitted by the city of Vancouver and it is your job now to tell the lobbyist in Ottawa and those profiting from wi-fi to take a hike. -- That is responsible government.

I await for your immediate response in the positive.

Sincerely,

Tina Zanetti
