

Public Safety Warning

BC Hydro has advised that on 7 May 2009 they will double the size of the service to 1395 Beach Ave, aka Surfside Apartment — increasing it by 200,000 watts to serve the new electrical antenna load of Bell Mobility¹.

BCH has advised that the existing transformers will be taken down and be replaced over a period of from 9 am to 3 pm with transformers of double the capacity.

200,000 watts of antenna capacity directed at you is dangerous to your health.²

Further particulars are available on the following website:
